

# PATIO FURNITURE REHAB

## Measuring chair slings which have different widths...

Occasionally some sling chairs will have the two width measurements more than 1/8" different. When this happens we need to have additional measurements to be sure your new sling will fit properly in the chair frame. Please review the following illustration and send us the following measurements going up to the nearest eighth inch:

- **Measure from where you can see the fabric at the very top of the sling chair**
- **Measure from the very top down to the back bolt at the arms**
- **Measure from the very front of the chair up to the first bolt**

After you have these measurement please email this information to [info@aplusredemption.com](mailto:info@aplusredemption.com) and reference your order number or name.

**Thank you for helping us produce your new slings with a good fit!**
